

Grainne Ryan

Aviate Systems

Aviate Systems provides software solutions to lessors and operators in the aviation sector. Grainne Ryan and co-founder Michael McGlinchey combined their extensive software development, business consultancy, and project management knowledge and experience across the aviation, telecommunications and financial sectors to set up the company in 2013. Their domain expertise in the aviation industry enables them to effectively understand the software needs of their clients and implement solutions that are right for them.

Aviate Systems provides end-to-end development services, including business intelligence and management reporting solutions to clients. Their services enable informed decision-making, with accurate real-time data presented in meaningful KPIs, dashboards and reports. The company also provides project management services that use best practice methodologies. Their development approach is collaborative and agile and their project managers are PMP certified.

They have developed a risk management system for a key customer that allows the risk department monitor, evaluate and control their credit, asset and transactional risks. Some of its features include credit, asset and transaction ratings and asset valuations. It includes business intelligence reporting on key metrics allowing drill down of key components for different business departments.

Plans are well advanced to expand the business and grow their customer base, with a focus on research and development into new product and service development for the aviation leasing sector. With 90% of the aviation leasing sector based outside Ireland, Aviate Systems expect to export services within the next two years, with a particular focus on the Far East, including Singapore and China.
